Primary School  
Calculation Policy  
Spring 2016**

**Y1 – Y6**

# St. John's Primary School – Calculation Policy 2016

## Introduction and rationale

The St. John's Primary School Calculation Policy has been written with the involvement of all staff to support the implementation of the new National Curriculum (2013). A document for each operation addresses what and how to teach year by year. The policy lays out expectations for both mental and written calculations (generally collated for Key Stage 1), including calculation of fractions, and includes statements from the national curriculum and supplementary guidance as below:

- National Curriculum statutory statements - in **bold**
- National Curriculum non-statutory guidance - in *italics*
- Additional/Supplementary guidance - plain text

$$\begin{array}{r} 200 + 30 + 4 = 234 \\ 500 + 20 + 7 = 527 \\ 700 + 60 + 1 = 761 \\ 10 \qquad \qquad 1 \end{array}$$

Orange boxes provide teaching guidance and tips, whilst speech bubbles denote examples either of key questions a teacher might ask or of children's thinking/ speaking. A vocabulary list is provided to encapsulate suggested vocabulary for each year group. This is not exhaustive. See 'Mathematics glossary for teachers in Key stages 1 to 3' on the NCETM <https://www.ncetm.org.uk/resources/42990#glossary>.

## Representations

Key to successful implementation of a school calculation policy is consistent use of representations (model and images that support conceptual understanding of the mathematics) and this policy promotes a range of relevant representations, across the primary years. Mathematical understanding is developed through use of representations that are first of all concrete (e.g. Numicon, Dienes apparatus), and then pictorial (e.g. Array, place value counters) to then facilitate abstract working (e.g. Columnar addition, long multiplication). This

policy guides teachers through an appropriate progression of representations, and if at any point a pupil is struggling they should revert to familiar pictorial and/or concrete materials/ representations as appropriate. Whilst a mathematically fluent child will be able to choose the most appropriate representation and procedure to carry out a calculation, whether written or mental, schools should support pupils with carefully selected representations that underpin calculation methods (as detailed in this policy), and ensure there is consistency across year groups. The 'Representations to support mental and written calculation' box on each page provides a range of models and images that underpin calculating in that year group. It is not an exhaustive collection, and applies to both mental and written calculation in most circumstances. Additional specific examples are included inside mental and written calculation boxes.

## Progression in Calculation

The St. John's Primary School calculation policy promotes particular methods and procedures with particular representations alongside to support understanding of calculation, in order to meet requirements (use of columnar methods from Year 3 onwards for all four operations, including long multiplication and long division in Year 5/6). It is recommended that schools ensure consistency in both procedure and conceptual understanding to ensure fluency and confidence with written methods. This policy guides schools in progression for each operation to ensure smooth transition. It is important that conceptual understanding, supported by the use of representations, is secure for procedures, and if at any point a pupil is struggling with a procedure, they should revert to concrete and/or pictorial resources and representations to solidify understanding.

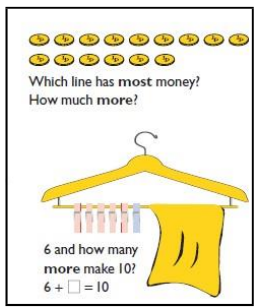

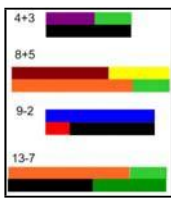

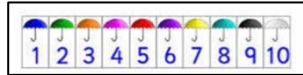

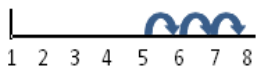

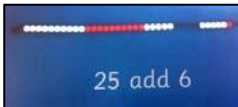

$$\begin{array}{r} 11 \\ 88 \\ 4.4 \\ 0.66 \\ \hline = 93.06 \end{array}$$

(<i>Number-addition and subtraction, Non-statutory guidance.</i>)</p>

# St. John's Primary School Calculation Policy for addition: Year 3

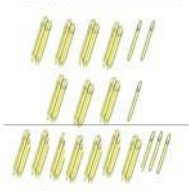

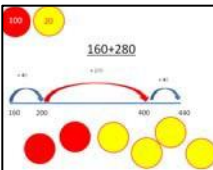

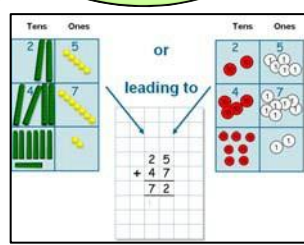

Mental Calculations	<p><b>Add numbers mentally, including:</b></p> <ul style="list-style-type: none"> <li>a three-digit number and ones</li> <li>a three-digit number and tens</li> <li>a three digit number and hundreds</li> <li>Partition all numbers and recombine, start with TU + TU then HTU + TU</li> <li>Use hundred square, place value counters, number lines</li> </ul>	<p><b>Common mental calculation strategies:</b></p> <ul style="list-style-type: none"> <li>Partitioning and recombining</li> <li>Doubles and near doubles</li> <li>Use number pairs to 10 and 100</li> <li>Adding near multiples of ten and adjusting</li> <li>Using patterns of similar calculations</li> <li>Using known number facts</li> <li>Bridging though ten, hundred</li> </ul>
---------------------	---	--

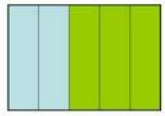

Written Calculations	<p><b>Add numbers with up to three digits, using formal written (columnar) methods</b></p> <p>Add to three digit numbers using physical and abstract representations;</p> <ul style="list-style-type: none"> <li>dienes, place value counters, empty number lines</li> </ul>
----------------------	--

$$\begin{array}{r} 30 + 4 \\ 20 + 5 \\ \hline 50 + 9 \end{array} \quad \rightarrow \quad \begin{array}{r} 34 \\ +25 \\ \hline 59 \end{array}$$

$$\begin{array}{r} 200 + 30 + 4 \\ 500 + 20 + 7 \\ 700 + 60 + 1 \\ \hline 10 \qquad 1 \end{array} \quad \rightarrow \quad \begin{array}{r} 234 \\ + 527 \\ \hline 761 \end{array}$$

**Revert to concrete representations if children find expanded/column methods difficult**

Representations to support mental and written calculations.	<p>Use a range of concrete, pictorial and abstract representations, including those below</p> <div style="display: flex; justify-content: space-around;"> <div style="text-align: center;"> <p>Bundles of straws</p>  <p>42 + 31 = 73</p> </div> <div style="border: 1px solid black; padding: 5px;"> <math display="block">\begin{array}{l} 0 + 50 + 3 \\ 10 + 40 + 3 \\ 20 + 30 + 3 \\ 30 + 20 + 3 \\ 40 + 10 + 3 \\ 50 + 0 + 3 \end{array}</math> </div> <div style="text-align: center;">  </div> </div> <div style="text-align: center; margin-top: 20px;"> <p>76 + 21</p> <math display="block">= 70 + 6 + 20 + 1</math> <math display="block">= 90 + 7 = 97</math> </div> <div style="text-align: center; margin-top: 20px;"> <p>I can explain my method using representations</p>  <p>Dienes and place value counters</p> </div> <div style="text-align: center; margin-top: 20px;"> <p>What is the same and what is different about all these methods?</p> </div> <p style="text-align: center;">Partitioning and recombining</p>
---	---

Fractions	<p>Addition of fractions with the same denominator within one whole.</p> <div style="text-align: right; margin-top: 20px;"> <p>Addition of fractions with the same denominator</p> <math display="block">\frac{2}{5} + \frac{3}{5} = \frac{5}{5}</math>  </div>
-----------	--

Links from other strands / bar modelling	<p>Pupils should estimate the answers to a calculation &amp; use inverse operations to check answers.</p> <p>Add amounts of money using both £ and p in practical contexts.</p> <p>Measure, compare and add lengths (m/cm/mm), mass (kg/g) &amp; volume/capacity (l/ml)</p> <p>Use bar modelling to solve word problems - including missing number problems, using number facts, place value, and more complex addition</p>
--	---

# St. John's Primary School Calculation Policy for addition: Year 4

**Informal methods to support mental Calculations**

Practise mental methods with increasingly large numbers

Consolidate partitioning and re-partitioning  
Use compensation for adding too much/little and adjusting  
Use Dienes, place value counters, empty number lines etc.

$$55 + 37 = 55 + 30 + 7$$

$$= 85 + 7$$

$$= 92$$

I know that  $63 + 29$  is the same as  $63 + 30 - 1$

**Common mental calculation strategies:**  
 Partitioning and recombining  
 Doubles and near doubles  
 Use number pairs to 10 and 100  
 Adding near multiples of ten and adjusting  
 Using patterns of similar calculations  
 Using known number facts  
 Bridging though ten, hundred  
 Complementary addition

**Written Calculations**

**Add numbers with up to four digits, using the formal written (columnar) method**  
 Add three digit numbers using columnar method and then move onto 4 digits.  
 Include decimal addition for money - Expanded then moving to compact

$$789 + 642$$

7	8	9	
+	6	4	2
<hr/>			
1	4	3	1
<hr/>			
1	1		

Answer: 1431

**Revert to expanded methods if children find formal calculation method difficult**

**Representations to support mental and written calculations.**

**Use physical/pictorial representations alongside expanded and columnar methods.**

Using Dienes

42 + 97

Compensating in mental addition

£12.32	
+ £11.81	
<hr/>	
£24.13	
<hr/>	
1	

Re-partitioning

0 + 50 + 3
10 + 40 + 3
20 + 30 + 3
30 + 20 + 3
40 + 10 + 3
50 + 0 + 3

Ask what is the same and what is different about all these methods?

Place value cards & counters to counters, support the expanded method in readiness for the column

**Fractions**

Addition of fractions with the same denominator *to become fluent through a variety of increasingly complex problems beyond one whole*  
*Counting using simple fractions and decimals, both forwards and backwards*

$$\frac{2}{5} + \frac{3}{5}$$

$$\frac{1}{2} + \frac{2}{4} = \frac{2}{4} + \frac{2}{4} = 1$$

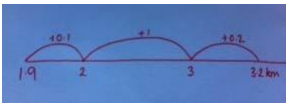

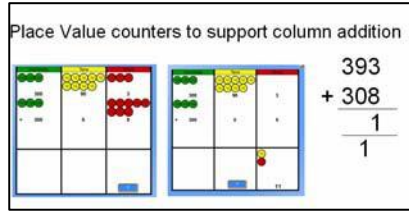

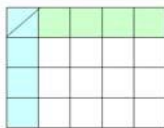

$\frac{1}{2}$	$\frac{1}{4}$
<hr/>	
$\frac{1}{4}$	

**Links from other strands / bar**

- Estimate and use inverse operations to check answers.
- Solve addition and subtraction two step problems in context, deciding which operations and methods to use and why
- Identify, represent and estimate numbers using different representations. (Place value)
- Recognise the place value of each digit in a four-digit number.
- Estimate, compare and calculate different measures, including amounts money in £ and p (including fractions and decimals)

# St. John's Primary School Calculation Policy for addition: Year 5

# St. John's Primary School Calculation Policy for multiplication: Year 3

## Mental Calculations

- recall and use multiplication and division facts for the 3, 4 and 8 multiplication tables (and 2, 5 and 10 multiplication tables from Y2)
- Use doubling to connect 2, 4 and 8 multiplication tables
- Develop efficient mental methods using commutativity and associativity
- Derive related multiplication and division facts
- calculate mathematical statements for multiplication using the multiplication tables that they know, including for two-digit numbers times one-digit numbers, using mental methods
- Partitioning: multiply the tens first and then multiply the units, e.g.  $57 \times 6 = (50 \times 6) + (7 \times 6) = 300 + 42 = 342$
- Children can apply these skills to solve spoken word problems too,
- Include missing number statements e.g.  $72 \div \square = 8$

**The associative law:**  
 $4 \times 12 \times 5 = 4 \times 5 \times 12$   
 $= 20 \times 12$   
 $= 240$

**The commutative law:**  
 $4 \times 12 = 12 \times 4$

Ensure opportunities to learn multiplication tables through use of visual models, images and also rote learning.

**Multiplication and division facts:**  
 $8 \times 4 = 32, 4 \times 8 = 32, 32 \div 4 = 8, 32 \div 8 = 4$

**Deriving related facts:**  
 $3 \times 2 = 60, 6 \div 3 = 2, 6 \div 2 = 3$   
 $\rightarrow 30 \times 2 = 60, 60 \div 3 = 20, 20 = 60 \div 3$

I have 8 packets, each containing 12 crayons. How many crayons do I have in total?

## Written Calculations

- write and calculate mathematical statements for multiplication using the multiplication tables that they know, including for two-digit numbers times one-digit numbers, progressing to formal written methods
- Estimate before calculating
- Ensure written methods build on/relate to mental methods

Towards the column method ...

x	20	4
6	120	24
		120 + 24 = 144

$24 \times 6$  becomes

24	
X 6	
120	
144	

Answer: 144

## Representations to support mental and written calculations.

**Use arrays for partitioning too**

$5 \times 3 = 15$  (array of 15 pink circles)

$3 \times 5 = 15$  (array of 15 pink circles)

$3 \text{ groups of } 40$  (array of 120 red circles)

$13p \times 3 = 10p \times 3 + 3p \times 3 = 30p + 9p = 39p$

$19 \times 3 = 57$ :  $3 \times 10 = 30$ ,  $3 \times 9 = 27$ ,  $30 + 27 = 57$

I can see eight groups of seven!

I can see seven, eight times!

And seven groups of eight!

**2 digit x 1 digit number:**  
 e.g.  $7 \times 38 = 266$

x	30	8
7	210	56
		210 + 56 = 266

Fin 3 times as tall as you. I'm 3 metres tall.  
 I'm only 1 metre tall.  
 Three times as many

## Fractions

- recognise and show, using diagrams, equivalent fractions with small denominators

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20
2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	
3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20		
4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20			
5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20				

## Links from other strands / bar modelling

- The comparison of measures includes simple scaling by integers (for example, a given quantity or measure is twice as long or five times as high)
- Pupils now use multiples of 2, 3, 4, 5, 8, 10, 50 and 100.
- Pupils understand and use simple scales (for example, 2, 5, 10 units per cm) in pictograms and bar charts with increasing accuracy
- solve problems, including missing number problems, involving multiplication, including positive integer scaling problems and correspondence problems in which n objects are connected to m objects

# St. John's Primary School Calculation Policy for multiplication: Year 4

<p style="writing-mode: vertical-rl; transform: rotate(180deg);">Informal methods to support mental Calculations</p>	<ul style="list-style-type: none"> <li>recall multiplication and division facts for multiplication tables up to <math>12 \times 12</math></li> <li>use place value, known and derived facts to multiply and divide mentally, including:             <ul style="list-style-type: none"> <li>multiplying by 0 and 1;</li> <li>dividing by 1;</li> <li>multiplying together three numbers</li> </ul> </li> <li>recognise and use factor pairs and commutativity in mental calculations</li> <li>practise mental methods and extend this to three-digit numbers to derive facts, (for example <math>600 \div 3 = 200</math> can be derived from <math>2 \times 3 = 6</math>)</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;">             Using the <b>distributive law</b>:  <math>39 \times 7 = 30 \times 7 + 9 \times 7</math>              Using the <b>associative law</b>:  <math>(2 \times 3) \times 4 = 2 \times (3 \times 4)</math> </div> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;">             Using facts and rules:  <math>2 \times 6 \times 5 = 10 \times 6 = 60</math> </div>

# St. John's Primary School Calculation Policy for multiplication: Year5

Informal methods to support mental Calculations

- multiply and divide numbers mentally drawing upon known facts
- multiply and divide whole numbers and those involving decimals by 10, 100 & 1000
- Recognise and use square & cube numbers (& notation)

Pupils should be taught throughout that percentages, decimals and fractions are different ways of expressing proportions.

**Spider diagrams**

To be successful at multiplying decimal numbers using a written method, children need to be completely secure in using known multiplication facts to derive linked decimal facts. Spider diagrams provide a visual way of recording these facts.

$24 \times 15 = ?$

I did:  $24 \times 5 = 120$  (half of  $24 \times 10$ ), then multiplied 120 by 3 to get 360

I did:  $(24 \times 10) + (24 \times 5)$ .

Written Calculations

- multiply numbers up to 4 digits by a one- or two-digit number using a formal written method, including long multiplication for two-digit numbers

$\begin{array}{r} 24 \\ \times 16 \\ \hline 144 \\ 240 \\ \hline 384 \end{array}$	$\begin{array}{r} 124 \\ \times 26 \\ \hline 744 \\ 2480 \\ \hline 3224 \end{array}$	$\begin{array}{r} 124 \\ \times 26 \\ \hline 744 \\ 2480 \\ \hline 3224 \end{array}$	$\begin{array}{r} 2741 \\ \times 6 \\ \hline 16446 \\ 42 \\ \hline 16446 \end{array}$
---	--	--	---

Compact methods for multiplication are efficient but often do not make the value of each digit explicit. When introducing multiplication of decimals, it is sensible to take children back to an expanded form such as the grid method where the value of each digit is clear, to ensure that children understand the process.

Does your answer seem reasonable?

Revert to expanded methods if children find formal calculation method difficult (see Y3/Y4)

Representations to support mental and written calculations.

	3000	500	60	7	
20	60000	10000	1200	140	71340
4	12000	2000	240	28	14268
					<b>Total 85608</b>

To start multiplying using the least significant digit for the grid method will support children with implementation of the written procedure

What is the same and what is different about these two methods?

Build on children's understanding: demonstrate multiplication of a decimal number alongside its whole number equivalent

$\begin{array}{r} 326 \\ \times 8 \\ \hline 2400 \\ 160 \\ 48 \\ \hline 2608 \end{array}$	$\begin{array}{r} 3.26 \\ \times 8 \\ \hline 24.00 \\ 1.60 \\ 0.48 \\ \hline 26.08 \end{array}$
---	---

Fractions

- multiply proper fractions and mixed numbers by whole numbers, supported by materials and diagrams
  - identify, name and write equivalent fractions of a given fraction, represented visually, including tenths and hundredths
- Pupils connect multiplication by a fraction to using fractions as operators (fractions of), and to division, building on work from previous years. This relates to scaling by simple fractions, including fractions > 1.

Scaling by  $\frac{1}{2}$   
"finding a half of a quarter"

$\frac{1}{2} \times \frac{1}{4}$

" $\frac{1}{4}$  of a  $\frac{1}{2}$ ": find a  $\frac{1}{2}$ , then divide it by 4.

Encourage children to draw diagrams to represent situations or problems involving fractions. Model how to do this, for example:

$\frac{2}{5}$  of a number is 20. What is the number?

Whole=50

Links from other strands / bar modelling

- identify multiples & factors, including finding all factor pairs of a number, & common factors of two numbers
  - know and use the vocabulary of prime numbers, prime factors and composite (non-prime) numbers
  - establish whether a number up to 100 is prime and recall prime numbers up to 19
  - solve problems involving multiplication and division including using their knowledge of factors and multiples, squares and cubes, and including understanding the meaning of the equals sign
  - solve problems involving multiplication and division, including scaling by simple fractions and problems involving simple rates
  - use all four operations to solve problems involving measure [for example, length, mass, volume, money] using decimal notation, including scaling.
  - convert between different units of metric measure; problems including money,.
- Other links: ratio,**  
Pupils use their knowledge of place value and multiplication and division to convert between standard units.  
Pupils calculate the perimeter of rectangles and related composite shapes, including using the relations of perimeter or area to find unknown lengths. Missing measures questions such as these can be expressed algebraically, for example  $4 + 2b = 20$  for a rectangle of sides 2 cm and b cm and perimeter of 20cm.  
Pupils calculate the area from scale drawings using given measurements.

# St. John's Primary School Calculation Policy for multiplication: Year 6

**Informal methods to support mental Calculations**

- perform mental calculations, including with mixed operations and large numbers (*increasingly large numbers & more complex calculations*)
- use all the multiplication tables to calculate mathematical statements in order to maintain fluency.
- use estimation to check answers to calculations & determine, in the context of a problem, an appropriate degree of accuracy.
- identify the value of each digit in numbers given to three decimal places and multiply and divide numbers by 10, 100 and 1000 giving answers up to three decimal places.

Use mental strategies to solve problems e.g.

- x4 by doubling and doubling again
- x5 by x10 and halving
- x20 by x10 and doubling
- x9 by multiplying by 10 and adjusting
- x6 by multiplying by 3 and doubling

Children should know the square numbers up to  $12 \times 12$  & derive the corresponding squares of multiples of 10 e.g.  $80 \times 80 = 6400$

How many different  $\times/\div$  facts can you make using 72? 7.2? 0.72?

What is the best approximation for  $4.4 \times 18.6$ ?

**Written Calculations**

- multiply multi-digit numbers up to 4 digits by a two-digit whole number using the formal written method of long multiplication (*short & long multiplication*)
- multiply one-digit numbers with up to two decimal places by whole numbers

£	6.23
x	27
	43.61
	124.60
£	168.21

**Revert to expanded methods if children find formal calculation method difficult (see Y4/Y5)**

**Representations to support mental and written calculations.**

Look at long-multiplication calculations containing errors, identify the errors and determine how they should be corrected

x	8	0.4	0.06	= 93.06
11	88	4.4	0.66	

$a \times 3 = b + 7 = 14.5$

What's the same?  
What's different?

**Fractions**

- multiply simple pairs of proper fractions, writing the answer in its simplest form e.g.  $\frac{1}{4} \times \frac{1}{2} = \frac{1}{8}$

Three key applications of understanding:

- Recognise that  $\frac{1}{4}$  of 12,  $\frac{1}{4} \times 12$  and 12 divided by 4 are equivalent
- Use cancellation to simplify the product of a fraction and an integer e.g.  $\frac{1}{2} \times 15 = 3$ ,  $\frac{2}{3} \times 15 = 2 \times \frac{1}{3} \times 15 = 2 \times 3 = 6$
- Work out how many  $\frac{1}{2}$ s in 15, how many  $\frac{2}{3}$ s in 15, how many  $\frac{2}{5}$ s in 1 etc.

$\frac{1}{2}$	$\frac{1}{4}$
---------------	---------------

To calculate  $\frac{1}{4} \times \frac{1}{2}$ , find  $\frac{1}{2}$  of a rectangle/array, then divide that  $\frac{1}{2}$  into  $\frac{1}{4}$ s. So  $\frac{1}{4}$  of  $\frac{1}{2}$  is  $\frac{1}{8}$

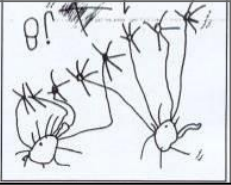

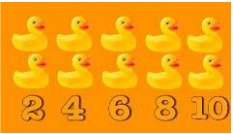

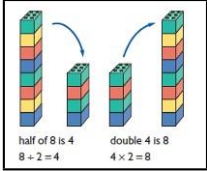

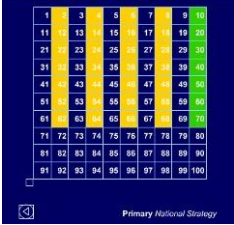

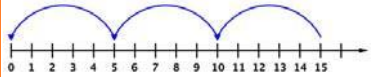

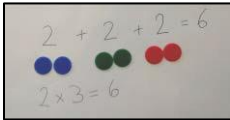

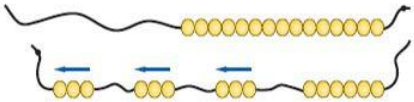

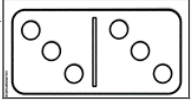

Pupils should use a variety of images to support their understanding of multiplication with fractions. This follows earlier work about fractions as operators (fractions of), as numbers, and as equal parts of objects, e.g. as parts of a rectangle.

**Links from other strands / bar modelling**

- identify common factors, common multiples and prime numbers
- use their knowledge of the order of operations to carry out calculations involving the four operations
- solve problems involving addition, subtraction, multiplication and division
- explore the order of operations using brackets; for example,  $2 + 1 \times 3 = 5$  and  $(2 + 1) \times 3 = 9$ .
- Fractions, decimals and percentages including equivalences in different contexts.
- solve problems involving the relative sizes of two quantities where missing values can be found by using integer multiplication and division facts
- solve problems involving the calculation of percentages [for example, of measures, and such as 15% of 360] and the use of percentages for comparison
- solve problems involving similar shapes where the scale factor is known or can be found
- solve problems involving unequal sharing and grouping using knowledge of fractions and multiples.
- Algebra including formulae, linear number sequences, combinations of variables
- Measurement including solving problems with conversion of units, decimal notation, area & volume
- Statistics including pie charts, line charts and calculating the mean

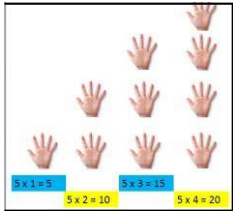

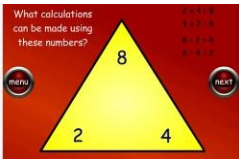

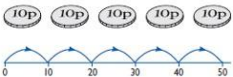

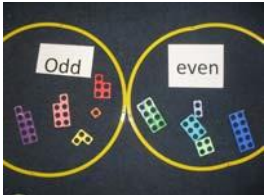

# St. John's Primary School Calculation Policy for division: Year 1

<p>Calculations</p> <p>Mental</p>	<p>Solve one-step problems involving multiplication and division, by calculating the answer using concrete objects, pictorial representations and arrays with the support of the teacher. <i>(Pupils) make connections between arrays, number patterns, and counting in twos, fives and tens.</i></p>  <p>Count on or back in 2s, 5s and 10s and useful look for patterns.</p> 
<p>Calculations</p> <p>Written</p>	<p>Pictorial jottings to support the calculation of <math>8 \div 4</math></p>  <p>Children should experiment with the concepts of sharing and grouping in a number of contexts. Initially they use their own recording—moving towards fluent, symbolic notation in Year 2.</p> <p>Conceptual understanding and recording should be continuously supported by the use of <b>arrays</b> as a default model, as well as other representations, (see below.)</p>   <p style="text-align: center;"><b>The relationship between multiplication and division must be continually considered.</b></p>
<p>Representations to support mental and written calculations.</p>	<p>Use a range of concrete and pictorial representations, including:</p> <ul style="list-style-type: none"> <li>Manipulatives to support children's own recording; and understanding of <i>sharing</i> and the link with multiplication.</li> </ul> <p><i>"How can we share 6 cakes between 3 people?"</i></p>  <p>Here, the cakes are placed in an array formation.</p>  <p><i>How many 2 tiles can we fit on the 6 tile?</i></p>  <p>Moving from concrete to pictorial, counters to represent the cakes to reinforce the relationship between multiplication and division.</p> <ul style="list-style-type: none"> <li>Manipulatives, and real-life objects to support children's own recording; and understanding of <i>grouping</i> and the link with multiplication.</li> </ul> <p>Bead strings</p>  <p>Coat hangers and socks support calculation of <math>8 \div 2</math></p>  <p><i>"Double 3 is 6. Half of 6 is 3."</i></p>  <ul style="list-style-type: none"> <li>Dominoes and dice to reinforce concepts of doubling and halving.</li> </ul>
<p>Fractions</p>	<p>Recognise, find and name a half as one of two equal parts of an object, shape or quantity Recognise, find and name a quarter as one of four equal parts of an object, shape or quantity. (See Representations above.)</p>
<p>Links from other strands / bar modelling</p>	<p><i>They practise counting as reciting numbers and counting as enumerating objects, and counting in twos, fives and tens from different multiples to develop their recognition of patterns in the number system (for example, odd and even numbers). (PLACE VALUE).</i></p> <p><i>Pupils are taught half and quarter as 'fractions of' by solving problems using shapes, objects and quantities. (FRACTIONS)</i></p>

# St. John's Primary School Calculation Policy for division: Year 2

*Division and multiplication concepts must be linked continuously.*

The relationship between multiplication and division must be continually considered.	
Calculations Mental	<ul style="list-style-type: none"> <li>Recall and use multiplication and division facts for the 2, 5, 10, 3s multiplication tables, including recognising odd and even numbers .</li> <li>Calculate mathematical statements for multiplication and division within</li> <li>the multiplication tables and write them using the multiplication (<math>\times</math>) division (<math>\div</math>) and equals (=) signs</li> </ul>
Calculations Written	<p style="background-color: #d1c4e9; padding: 5px; border: 1px solid black; display: inline-block;">"5, one time", "5, two times" and so on.</p>     <ul style="list-style-type: none"> <li>Show that multiplication of two numbers can be done in any order (commutative) and division of one number by another cannot</li> <li>Solve problems involving multiplication and division, using materials, arrays, repeated addition, mental methods, and multiplication and division facts, including problems in contexts. (<i>See below.</i>)</li> </ul> <p style="text-align: center;"><math>\frac{1}{2}</math> of 26 = 13 <math>26 \div 2 = 13</math></p> <p style="text-align: right;">Pupils decode a problem first, represent it using manipulatives and jottings; and finally record it symbolically.</p>
Representations to support mental and written calculations.	<p>Use a range of concrete and pictorial representations, including:</p> <ul style="list-style-type: none"> <li>Arrays           <div style="display: flex; align-items: center; margin-top: 10px;">  <div style="margin: 0 10px;"> <math>7 \times 2 = 14</math> <math>14 \div 2 = 7</math> </div>  <div style="margin: 0 10px;"> <math>2 \times 7 = 14</math> <math>14 \div 7 = 2</math> </div> <div style="border: 1px solid purple; border-radius: 15px; padding: 5px; background-color: #d1c4e9;">             Is 14 an odd number? Why?"           </div>  </div> <div style="margin-top: 10px; text-align: right;">  <div style="border: 1px solid gray; border-radius: 50%; padding: 10px; background-color: #e0e0e0; width: fit-content;">             How many groups of 5 minutes have passed when the minute           </div> </div> 
Fractions	<p>Recognise, find, name and write fractions <math>\frac{1}{3}</math>, <math>\frac{1}{4}</math>, <math>\frac{3}{4}</math>, <math>\frac{2}{4}</math> of a length, shape, set of objects or quantity Write simple fractions for example, <math>\frac{1}{2}</math> of 6 = 3 and recognise the equivalence of <math>\frac{1}{2}</math> and <math>\frac{2}{4}</math>.</p>
Links from other strands / bar modelling	<ul style="list-style-type: none"> <li>Count in steps of 2, 3, and 5 from 0, and in tens from any number, forward and backward.</li> <li>Recognise the place value of each digit in a two-digit number (tens, ones) (PLACE VALUE).</li> <li>Tell and write the time to five minutes, including quarter past/to the hour and draw the hands on a clock face to show these times, (MEASURES).</li> </ul>

# St. John's Primary School Calculation Policy for division: Year 3

Mental Calculations

Pupils should be taught to recall and use multiplication and division facts for the 3, 4 and 8 multiplication tables.

*Pupils continue to practise their mental recall of multiplication tables... in order to improve fluency.*

*Pupils develop efficient mental methods, for example, using commutativity and associativity (e.g.,  $4 \times 12 \times 5 = 4 \times 5 \times 12 = 20 \times 12 = 240$ ) and multiplication and division facts to derive related facts.*

$$36 \div 3 = 12$$

$$30 \quad 6$$

$$30 \div 3 = 10 \quad 6 \div 3 = 2$$

$$+ \quad \quad \quad +$$

"4 x 3 is 12, so 12 ÷ 3 = 4."

Written Calculations

Pupils should be taught to:

- write and calculate mathematical statements for multiplication and division using the multiplication tables that they know, including for two-digit numbers times one-digit numbers, using mental and progressing to formal written methods.

- solve problems, including missing number problems, involving multiplication and division, including positive integer scaling problems and correspondence problems in which n objects are connected to m objects, (see [Links from other strands](#), below.)

"I know  $6 \div 3 = 2$ , so  $60 \div 3 = 20$ ."  
"I know  $12 \div 3 = 4$ , so  $120 \div 3 = 40$ ."

New written methods can be modelled alongside mental or informal methods to ensure understanding.

Representations to support mental and written calculations.

Use a range of concrete and pictorial resources, including:

63 ÷ 3 equals three groups of 2 tens and a one.

How could I calculate  $72 \div 3$ ?

Informal exploration with manipulatives supports the progression to formal written methods—which is continued in Year 4.

Fractions

- Recognise that tenths arise from dividing an object into 10 equal parts and in dividing one-digit numbers or quantities by 10.
- Recognise and show, using diagrams, equivalent fractions with small denominators.
- Recognise, find and write fractions of a discrete set of objects: unit fractions and non-unit fractions with small denominators.

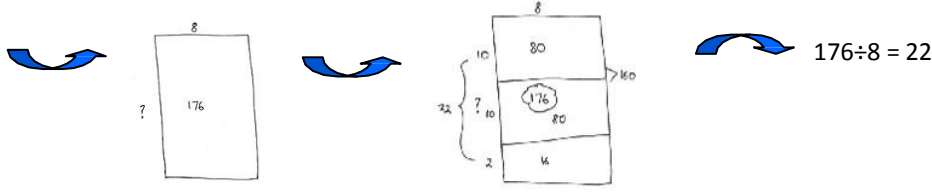

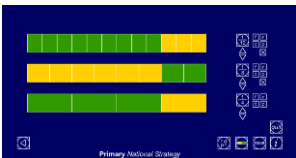

Links from other strands / bar modelling

Solving fraction of amount word problems – including simple equivalents

Solve problems, including missing number problems division,

(FRACTIONS)</li> </ul>

# St. John's Primary School Calculation Policy for division: Year 5

Informal methods to support mental Calculations

Pupils should be taught to:

- multiply and divide whole numbers and those involving decimals by 10, 100 and 1000
- multiply and divide numbers mentally drawing upon known facts

identify multiples and factors, including finding all factor pairs of a number, and common factors of two numbers .

If  $42 \div 6 = 7$   
 $\div 10$        $\div 10$   
 Then  $4.2 \div 6 = 0.7$

Factorising  
 $480 \div 15$   
 $= 480 \div 5 \div 3$

"I know that the answer to  $138 \div 6$  will be close to 20, because  $2 \times 6 = 12$ , so  $20 \times 6 = 120$ ."

Pupils apply all the multiplication tables and related division facts frequently and use them confidently.

Written Calculations

Pupils practise and extend their use of the formal written methods of short multiplication and short division.

- Divide numbers up to 4 digits by a one-digit number using the formal written method of short division and interpret remainders appropriately for the context.

$98 \div 7$  becomes

$$\begin{array}{r} 14 \\ 7 \overline{) 98} \\ \underline{7} \phantom{0} \\ 28 \\ \underline{28} \\ 0 \end{array}$$

Answer: 14

$432 \div 5$  becomes

$$\begin{array}{r} 86 \text{ r } 2 \\ 5 \overline{) 432} \\ \underline{40} \phantom{0} \\ 32 \\ \underline{30} \\ 2 \end{array}$$

Answer: 86 remainder 2

$496 \div 11$  becomes

$$\begin{array}{r} 45 \text{ r } 1 \\ 11 \overline{) 496} \\ \underline{44} \phantom{0} \\ 56 \\ \underline{55} \\ 1 \end{array}$$

Answer:  $45 \frac{1}{11}$

- Pupils interpret non-integer answers to division by expressing results in different ways according to the context, including with remainders, as fractions, as decimals or by rounding. (See Representations below.)

Revert to expanded methods if children find formal calculation method difficult

Representations to support mental and written calculations.

Can we divide this  $100$  taken into 6 equal groups?, then we must exchange it for ten  $10$  tokens. Can we divide into 6 groups now?

Short division with exchange.

Practical experience with manipulatives is vital for children to talk through the language of division e.g. exchange, remainder; and to embed conceptual understanding.

Understanding remainders.

2 out of a whole group of 4 =  $\frac{2}{4} = \frac{1}{2} = 0.5$

$98 \div 4 = \frac{98}{4} = 24 \text{ r } 2 = 24 \frac{1}{2} = 24.5$

What is the same? What's different about the ways that these remainders are expressed?

Fractions

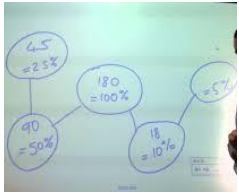

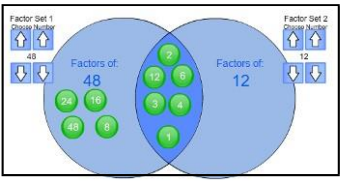

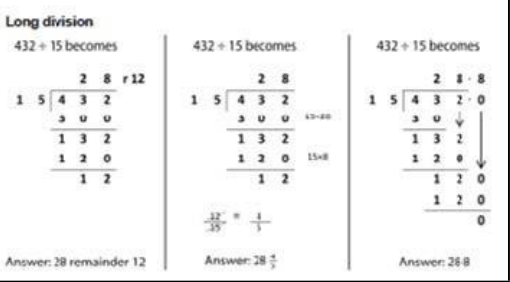

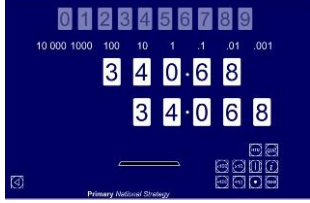

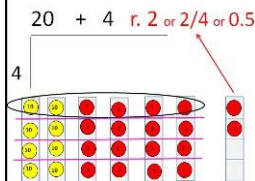

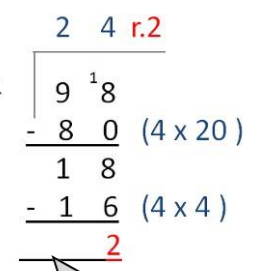

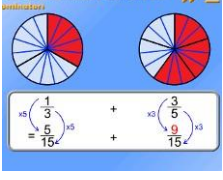

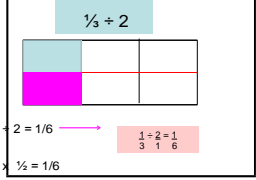

- Recognise mixed numbers and improper fractions and convert from one form to the other and write mathematical statements  $> 1$  as a mixed number .
- Pupils connect equivalent fractions  $> 1$  that simplify to integers with division and other fractions  $> 1$  to division with remainders.
- Pupils connect multiplication by a fraction to using fractions as operators (fractions of), and to division.
- Pupils should make connections between percentages, fractions and decimals

Links from other strands / bar modelling

- Pupils use all four operations in problems involving time and money, including conversions. ....using decimal notation, including scaling.
- calculate and compare the area of rectangles (including squares). (MEASURES)

- establish whether a number up to 100 is prime and recall prime numbers up to 19
- recognise and use square numbers and cube numbers, and the notation for squared (2) and cubed (3)
- solve problems involving multiplication and division including using their knowledge of factors and multiples, squares and cubes and including scaling by simple fractions and problems involving simple rates.
- solve problems involving addition, subtraction, multiplication and division and a combination of these, including understanding the meaning of the equals sign. (NUMBER—MULTIPLICATION AND DIVISION)
